SUFFIELD, CT. (June 21, 2009) – The Emmy-award winning hit ABC television show, “Extreme Makeover: Home Edition,” is using Huber Engineered Woods LLC’s ZIP System® roof and wall sheathing to construct the first home of season seven, themed “Get on the Bus.” The ZIP System roof and wall sheathing features superior moisture resistance and quick installation properties that will help Western New England builder, Pecoy Signature Homes, successfully complete the home in just one week.

The lucky area family was surprised on June 21 by a visit from Ty Pennington, team leader for the show when the family’s identity was made public. Construction on the home is underway and will conclude with the show’s “reveal” on Sunday, June 28 when Pennington recites the show’s signature phrase, “Move that bus!”

After being used on several episodes last season, Huber Engineered Woods will join “Extreme Makeover: Home Edition” to make ZIP System® roof and wall sheathing its preferred products for framing and roofing in season seven.

ZIP System® Roof Sheathing

ZIP System® roof panels have a built-in moisture barrier and eliminate the need for felt paper and H-clips. A code-recognized structural panel and underlayment all-in-one, ZIP System roof panels prevent expensive rework due to torn felt, and shingles or tiles can be applied directly to the panels. Since the ZIP System is faster to install than traditional methods and provide an instant 120-day rough dry-in, builders can schedule subcontractors sooner, ultimately completing the house in less time.

ZIP System® Wall Sheathing

The ZIP System® wall sheathing with a built-in water-resistive barrier is a structural wall panel, moisture barrier and air barrier all-in-one, providing a tight building envelope and superior moisture resistance during and after the construction. The Department of Energy recognizes that air barriers help prevent air leakage homes, which can account for 30 percent or more of a homes heating and cooling costs. ZIP System® tape is used on both the roof and wall products and provides moisture resistance for seams, valleys and ridges, can help reduce air leaks as recommended by the Seal and Insulate with the ENERGY STAR® effort, and is code recognized as window and door flashing tape when used with ZIP System Wall sheathing (ESR-2227).

Pecoy Signature Homes, considered among the premier custom homebuilders and remodelers in Western New England, is sending out a call in the region to sub-contractors and materials providers to participate by contacting Pecoy Signature Homes at www.pecoyextreme.com. Pecoy Signature Homes, subcontractors and vendors are providing services and materials on a donated basis as part of the build.
